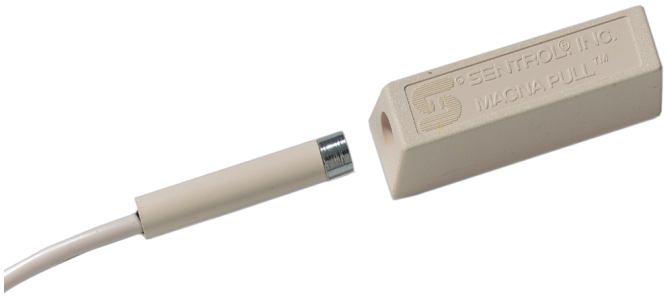
DC501

Mini magnetic pull-apart cords

The magnapull magnetic pull-apart cords are used to protect valuable free-standing items that are stored outdoors. The high-impact plastic housing protects the contact from corrosion or high resistance build-up. End users simply insert the cable into the contact housing, there is nothing to line up. An alarm condition is created when the cord with the magnet is pulled from the housing.



Details

- Comprehensive product range
- Superior quality
- Easy installation
- Standard 2 m wire length
- Tamper loop provided

DC501

Mini magnetic pull-apart cords
